at Eglinton, Toronto

LIGHT REFRESHMENTS WILL
BE SERVED AT 6:00 P.M.

COURSE WILL COMMENCE AT 6:30

TESTING STABILITY & INTEGRATION OF AN IMPLANT

Before one can restore an implant, one must be sure that it in fact is integrated and stable. Over the years we have used many methods to do this and with sound clinical judgment determination of the health of an implant can usually be accomplished with good accuracy before the implant is restored. This presentation will present several clinical methods as well as new digital methods to evaluate the health of an implant at the time of restoration as well as at the time of placement. If the implant needs removal, a simple grafting method will be discussed that can be used to help rebuild the site for future implant placement. Participants will have the opportunity use hands on models to test the methods presented.

Presented by Dr. Izchak Barzilay
