

PROVEN EFFICACY... GREAT DELIVERY SYSTEM

PeriAcryl® Cyanoacrylate Tissue Adhesive

PeriAcryl is a fast drying butyl cyanoacrylate tissue adhesive with a very low viscosity. It is an effective tissue adhesive which displays hemostatic properties and a bacteriostatic action.

In Canada, PeriAcryl is indicated for use in the oral cavity as a securing agent for free gingival grafts and as a liquid dressing for donor sites, biopsy sites and securing other types of dental dressings. PeriAcryl is also indicated for use as a dental cement for bonding dental materials such as crowns, caps and pins.

*"PeriAcryl has several advantages over conventional suture materials in soft-tissue surgery: it saves time, is hemostatic and bacteriostatic, and doesn't need to be removed during post-operative follow-up."*¹

PREFILLED UNITS (12 x 0.2 mL)
2 mL BOTTLE (including 20 pipettes and tray)
