

SAFESCRAPER® TWIST

Autogenous bone harvester

Safescraper TWIST provides an easy method to obtain ideal autologous cortical bone for grafts in any type of defects with a minimally invasive technique.

The exclusive cutting performance of the blade allows cortical shavings to be collected, while preserving maximum cell vitality, which is essential for graft integration.

The bone collected is already combined with blood and ready to be positioned in the defect, or it can be temporary maintained in aseptic conditions in the transparent chamber.

New side opening system of the chamber that improves the device stability and provides, when desired, an ideal container for composite grafts

Button to prevent accidental opening during use or at device disposal

Safescraper **TWIST**

Minimally invasive

The manual harvesting technique is nontraumatic and well tolerated by the patient

Useful

Cortical bone can be harvested from any intraoral site, including near to the bone defect

Versatile

It is the ideal device for both extensive and minor harvesting procedures.

Its curved tip version facilitates access in all intraoral donor sites
